F FWallSim · Firewall Course

CLASS 14

Nobody can browse the internet

Troubleshooting: NAT

Advanced | ~10 minutes | FWallSim v1.0.0 (FortiOS 7.4 style)

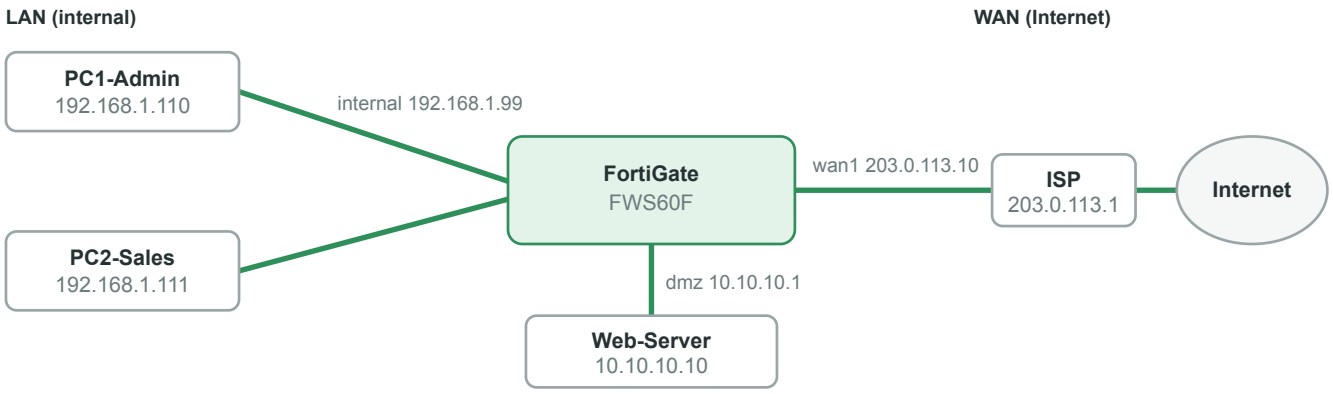

YOU WILL LEARN

- Troubleshooting: NAT

BEFORE YOU START

Finish Class 13 first.

The lab network

The goal

THE IDEA

Users call: "the internet is down". The policy is there and the counters go up. Find the fault using the Packet Walk or "diagnose debug flow".

How to start

1. Open FWallSim and log in.
2. Click **Labs** in the header.
3. Find **Nobody can browse the internet** and click **Start**.
4. The Lab Guide panel opens. Each task below gets a green tick as soon as it works.

Tasks

1. **PC1 can browse www.example.com**

   Reproduce from the Traffic Generator and read where it fails.

Hints

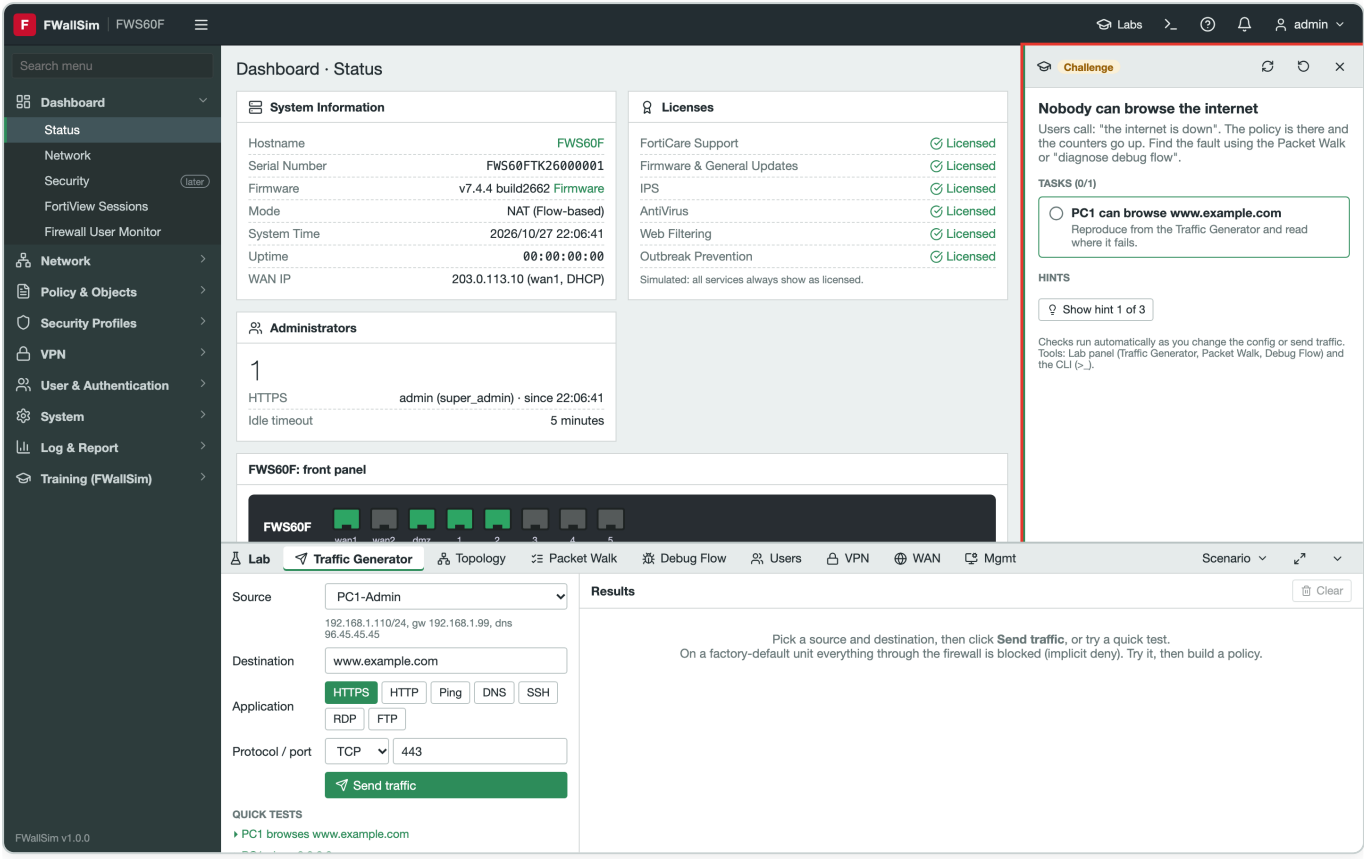

1. The request leaves the FortiGate. What source address does it have on the internet?
2. Look at the "Source NAT" step in the Packet Walk.
3. Private addresses (192.168.x.x) cannot receive replies from the internet.

Solution

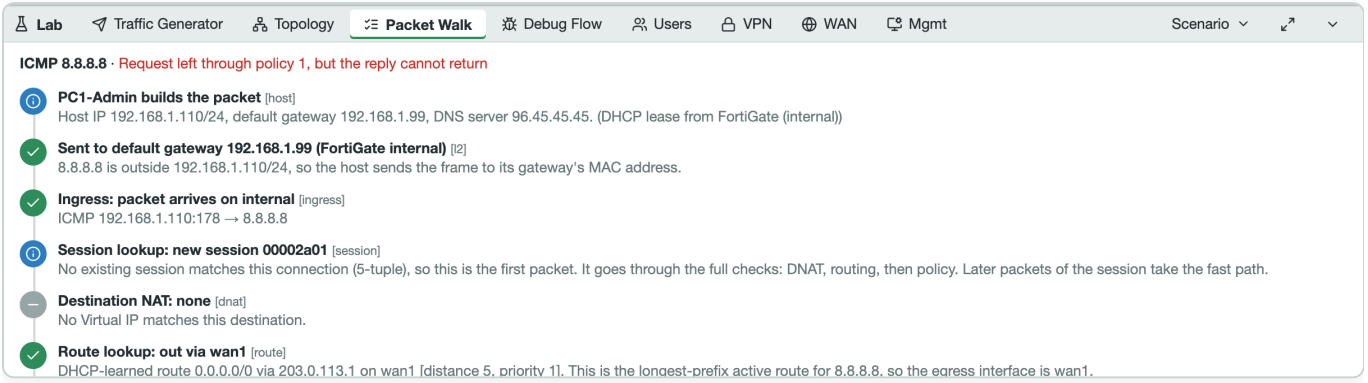

1. Edit policy 1 (LAN-to-Internet).
2. Turn NAT on (Use Outgoing Interface Address).
3. OK, then test again.

Screenshots

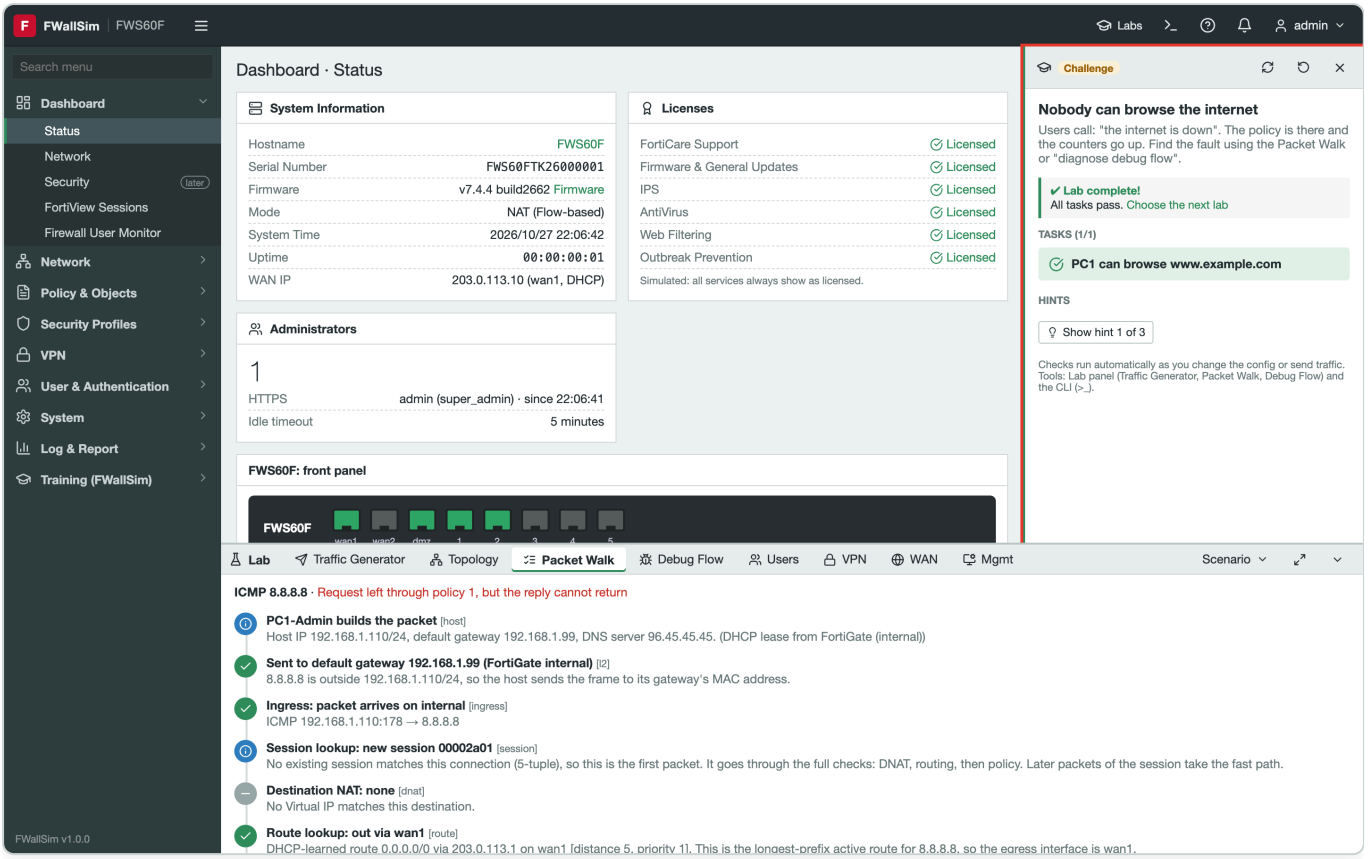

Numbered red markers show where to click or what to look at.

Search

Name	ID	From	To	Source	Destination	Schedule	Service	Action
internal → wan1 (1)								
LAN-to-Internet	1	internal	wan1	LAN-Subnet	all	always	ALL	✓ ACC
wan1 → dmz (1)								
Web-Server-Inbound	2	wan1	dmz	all	VIP-WebServer-HTTP	always	HTTP	✓ ACC
dmz → wan1 (1)								
DMZ-to-Internet	3	dmz	wan1	WebServer-DMZ	all	always	DNS HTTP HTTPS	✓ ACC
Implicit (1)								
Implicit Deny	0	any	any	all	all	always	ALL	DEN

Policies are evaluated from top to bottom and the **first match wins**. Drag rows to reorder them. Right-click for more actions (insert, clone, enable/disable, logs). Right-click the Implicit Deny row to log violation traffic.
